

ABSTRACT OF THE DISCLOSURE

5 A communication connection to a second user equipment (UE B) by a first user
equipment (UE A) is requested, the request including a specific information element for
an identification of UE B, a determination is made (S3) in a database on the basis of the
specific information element identifying UE B's location within the communication
network, a decision is made (S5, S6) whether UE B is reachable or accepts the
communication connection or not, and if the decision is positive, the communication
10 connection is established (S7) between UE A and UE B adapted to perform a packet
data communication.
